DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I : Directed to a displacement unit for a manipulation system with the pressure fluid control valve and the control module being integrated into one of the components and drawn to claims 87-125. (Fig. 1).

Species II : Directed to a displacement unit for a manipulation system with the drive having an outer surface; the pressure fluid control valve and the control module being mounted on the outer surface of the drive; and a display elements and drawn to claims 126-143. (Figs.4 and 6).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 3726

the election, applicant must indicate which are readable upon the elected species. MPEP

§ 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Species I : Directed to a displacement unit for a manipulation system with the pressure fluid control valve and the control module being integrated into one of the components and drawn to claims 87-125. (Fig. 1).

Species II : Directed to a displacement unit for a manipulation system with the drive having an outer surface; the pressure fluid control valve and the control module being mounted on the outer surface of the drive; and a display elements and drawn to claims 126-143. (Figs.4 and 6).

The following claim(s) are generic: None.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species I does not have the features of Species II like the pressure fluid control valve and the control module being mounted on the outer surface of the drive; and a display elements. Species II does not have the features of Species I, like the pressure fluid control valve and the control module being integrated into one of the components.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
